2020.12.15

# The PYTHIA tune for p+p 200 GeV

---

PYTHIA tune: p+p 200 GeV

```
pythia.readString("HardQCD:all = on");  
pythia.readString("TimeShower:alphaSvalue = 0.18");  
pythia.readString("PhaseSpace:pTHatMin = 1.3");  
pythia.readString("Beams:eCM = 200.");
```

MultipleInteractions: Default tune

# The PYTHIA tune for p+p 200 GeV

---

Re-generate samples with:

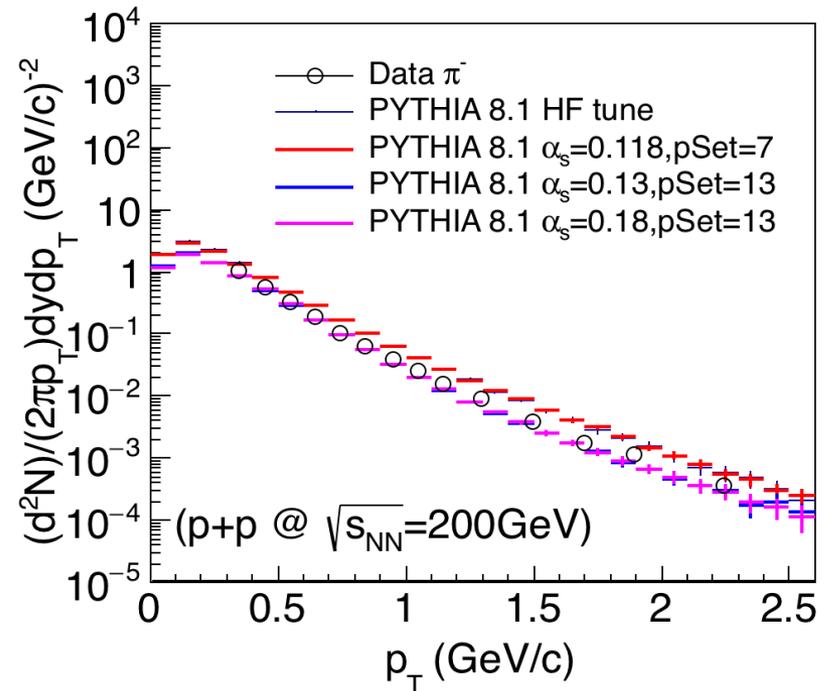

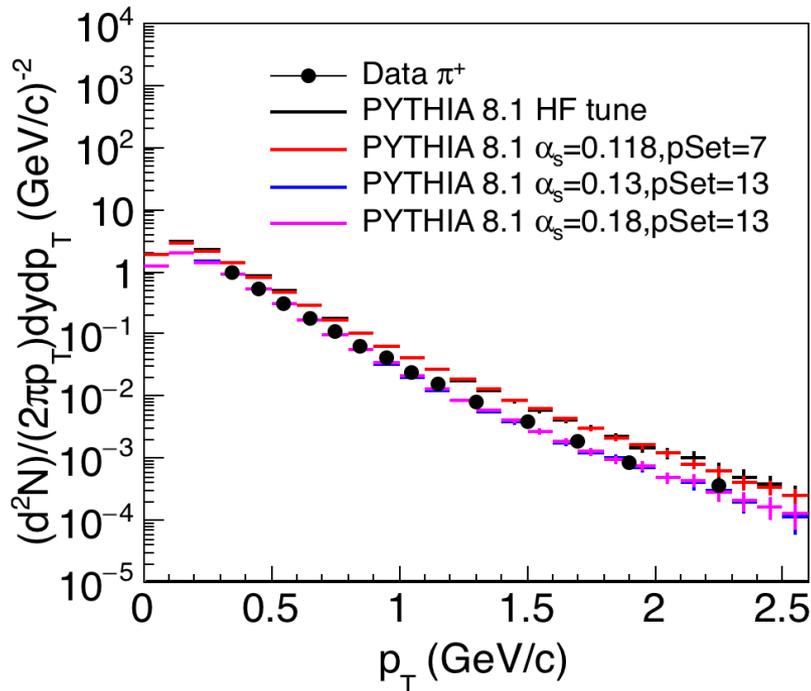

- 2 PDFs: CTEQ6L and NNPDF2.3
- **SoftQCD: inelastic = on**
- MPI K-factor: 1.0
- 3 Alpha\_s: **alpha\_s(M\_Z) = 0.1180 for CTEQ6L, 0.130 for NNPDF2.3, 0.180 for NNPDF2.3**

# The charm spectrum

STAR Data: Phys. Rev. D 86, 072013

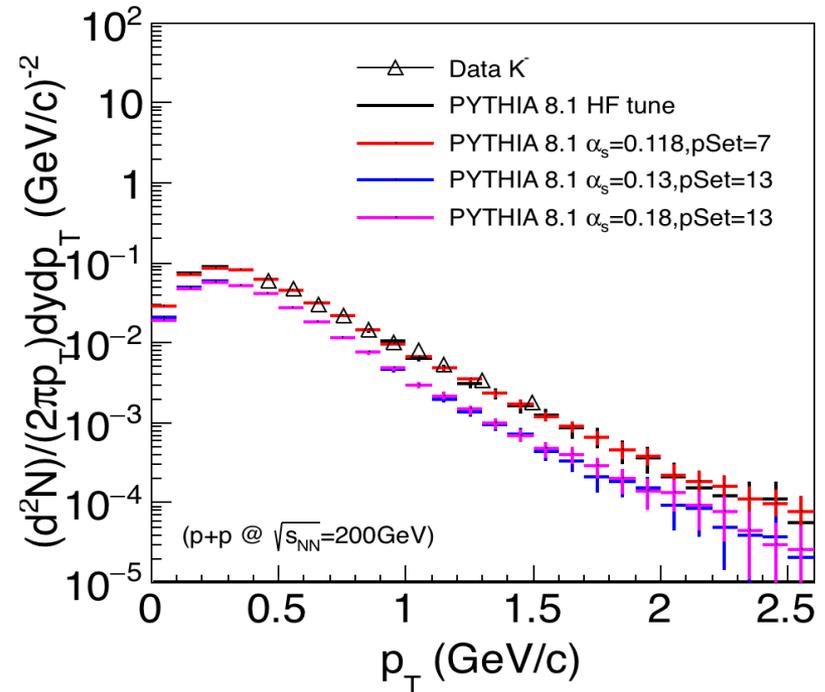

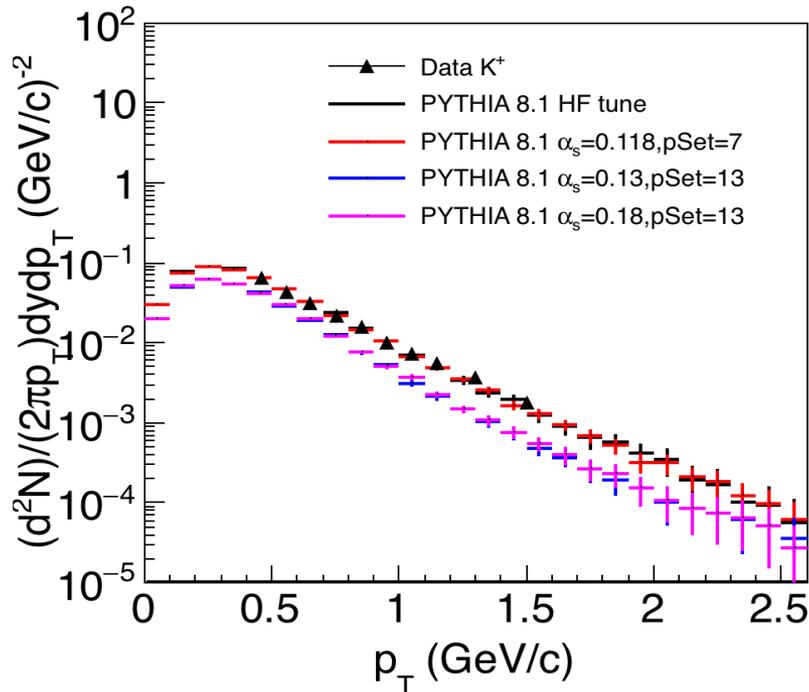

# The identified particle spectrum

Pion data from STAR publication:
